- Gained hands-on experience in front-end and back-end web development, working on diverse projects.
- Successfully applied knowledge to deliver solutions and deepened understanding of web technologies.
- Recognized for hard work and willingness to learn and explore complex technical concepts.

## PROJECTS

---

**Video Audio Replacement with AI-Generated Voice.** Developed an application that replaces video's audio with AI-generated voice. It Transcribes and corrects video's audio using Whisper and language-tool-python and replaces original audio with AI-generated voice via Coqui TTS, ensuring proper sync using MoviePy. ([Click here](#))

**Rule Engine With AST.** A rule engine application built with Python, Flask, SQLite, HTML, CSS that determines user eligibility based on attributes using an Abstract Syntax Tree (AST) to represent conditional rules. ([Click here](#))

**User Profile UI.** Developed a Profile UI using HTML and CSS, focusing on a clean and user-friendly layout. The Profile UI enhances user interaction by providing an organized and visually appealing interface. ([Click here](#))

**Airbnb Clone.** Developed a clone of Airbnb to replicate its core features. Utilized HTML, CSS, and JavaScript for front-end development, focusing on responsive design and user interaction. ([Click here](#))

## EXTRA-CURRICULAR ACTIVITIES

---

- **Workshops and Seminars:** Attended various workshops and seminars on emerging technologies and software development practices to stay updated with industry trends and enhance technical skills.

## LEADERSHIP

---

- Act as a mentor for junior students, providing guidance on coursework, project development, and career choices, fostering a supportive learning environment.
